

October 10, 2017

Dear Customer:

This letter is to inform you that Everlube Products will no longer sell products that contain hexavalent chrome into the European Union. The REACH sunset date for hexavalent chrome compounds was on September 21, 2017. As a result of this REACH restriction, Everlube Products will no longer be accepting orders for the following products from companies in the European Union.

Everlox® 16B
Inlox® 44
Inlox® 88
Everlube KG 200 (Formerly Kal-Gard KG 200)

Everlube Products will be assisting customers that want a functionally equivalent product to replace the hex chrome containing products above. Other chrome-containing products, including Everlube KG 2240C (Formerly Kal-Gard 2240C) and Everlube KG 2245 (Formerly Kal-Gard 2245), will continued to be available to our EU customers. The zinc chromate corrosion inhibitor used in these two products is based on trivalent chrome and not hexavalent chrome and is, therefore, not affected by the REACH restriction of hex chrome compounds.

Thank you for your understanding and please let us know how we can be of assistance.

Regards,

Charles J Beall
